

Scenario Metrics

This section explores the impacts of the insight2050 scenarios. It describes the analysis of the scenarios for the complete range of fiscal, environmental, transportation, and other RapidFire output metrics. The RapidFire model underwent significant calibration and customization to prepare it for scenario development and analysis in Central Ohio. The customized model was used to develop and model the full range of metrics for the four insight2050

scenarios described in this report. Region-wide results are presented here; the 7-county region includes Delaware, Fairfield, Franklin, Licking, Madison, Pickaway, and Union counties. Input assumptions for the model and metrics are summarized in the Appendix. Note that “cumulative” results reflect sum totals over many years (e.g., 2010 to 2050), while “annual” results reflect values in a single year.
